

K2 Viper

HQI Clamp on Lamp

Going Topless has never been more Rewarding!

70W
150W

We are proud to launch our new K-2 Viper HQI Clamp on Lamp Series. The K-2 Viper offers a streamlined design to fit on virtually any small reef tank (e.g. Nano-Cube) or use it in series for larger aquariums. All models include one 14,000k (Double Ended) metal halide lamp which casts the most intense amount of light for SPS, Clams, and Hard Corals.

FEATURES

Versatility keeps you in control.

The K-2 Viper will virtually fit on any size aquarium! Our unique design allows you to angle the light right where you need it most. With 3 separate adjustment knobs, you can configure the way you deem most fitting for your live inhabitants' lighting needs.

3 SEPARATE ADJUSTMENTS

Height Adjustment

Extension Adjustment

Head Adjustment

Are you Tough Enough

The K-2 HQI Lamp is protected within a powder coated finished aluminum housing to resist corrosion and help dissipate heat. Heavy Duty ABS extension arms and mounting brackets keep the lighting system stable and secure for years of operation.

Replicating Mother Nature

There is nothing more intense or spectacular than the vibrant rays the sun can produce. But, we sure came close to emulating the power of the sun enclosed in a compact design for the next best thing. The K-2 Viper is guaranteed to instantly transform aquariums with fluorescent lighting into showroom display tanks with rhythmic shimmering and intensified light output. Your live inhabitants won't know the difference, we guarantee it!

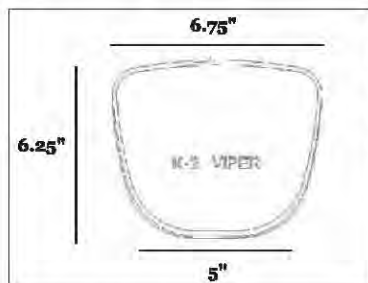

All models are preinstalled with our 14,000K Double Ended HQI lamp that produces a crisp, ice-white color with a hint of blue to accent corals and fish. Your unit also includes our "Hammer tone" reflector for maximum reflective efficiency surrounded by a UV Glass Shield to protect you and livestock from harmful UV output.

Keep it Remote

Your K-2 Viper comes equipped with a remote UL Recognized metal halide ballast with male/female disconnects to safely position it away from moisture and salt build up. All ballasts are housed in an aluminum vented exterior for heat dissipate on and corrosion resistance.

SPECIFICATIONS
